

Ransomware Attacks - Learn How to Protect Yourself and Your Business

DENVER BREAKFAST BRIEFING

Event

1801 California Street
1st Floor Conference Center
Toronto Conference Room

6.27.17

7:30 AM - 9:15 AM (Complimentary Breakfast Included)

****This event has been postponed and will be rescheduled in August. Check back for updates****

Malicious software or "ransomware" has been used in a massive hacking attack, affecting tens of thousands of computers worldwide.

The recent ransomware worm called "WannaCry" infected about 200,000 computer systems in 150 countries, forcing British hospitals to turn away patients and throwing other government agencies and businesses into chaos.

While these high-profile cases may seem remote from your business, there are countless ransomware attacks that don't make the news. What can you do to make sure your data isn't vulnerable to attack? How do you respond if your company is attacked?

Join our presenters for a fun, informative, interactive breakfast, in which we will walk you through case studies and provide you with information to develop your own plans for preventing, addressing and recovering from ransomware attacks.

You don't want to miss it!
